and define the problem

01

# Pizza chain data set

Today in our presentation we are going to explore how Business intelligence with data-driven insights can transform Moon pizza chain's operations.

- We use multiple data sets like pizza sales, competitors sales data and customer reviews.
- All the data is taken from Kaggle.com.

# Problem

## Definition

The pizza chain faces challenges with fluctuating demand and inconsistent customer satisfaction during peak periods. The goal is to accurately forecast high-demand periods, optimize workforce management, and enhance customer satisfaction to improve overall sales and service quality.

# Why it matters

## Maximizing Profitability:

Accurately forecasting demand helps the pizza shop prepare for high-sales periods, ensuring that popular items are always in stock.

## Optimizing Workforce Management:

Efficient staffing based on sales data ensures that the shop is well-staffed during peak hours.

## Improving Customer Satisfaction:

By addressing customer complaints related to peak periods (like delays or mistakes), the shop can enhance service quality.

## Staying Competitive:

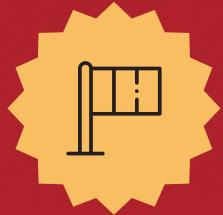

Benchmarking against competitors helps identify areas for improvement, whether in menu offerings or service strategies.

# Data sources

External	Operational
<p><b>Competitor Data:</b> Sales trends, pricing strategies, and menu offerings from major competitors.</p>	<p><b>Sales Data:</b></p> <ul style="list-style-type: none"><li>• Daily, weekly, and monthly sales by category, size, and type of pizza.</li><li>• Hourly transaction records to identify peak sales periods.</li></ul>
<p><b>Economic and Market Data:</b> Market trends and industry reports on the food delivery and pizza industry.</p>	<p><b>Customer Data:</b></p> <ul style="list-style-type: none"><li>• Customer order history, preferences, and loyalty program participation.</li><li>• Categorized customer reviews (complaints, delivery feedback, menu feedback).</li></ul>

# Design Process

How we collected data and developed the dashboard

02

## Data collection and exploration

- **External Data Collection:**

Gather competitor sales data, customer reviews from social media and review platforms, local events etc.

- **Operational Data Collection:**

Extract sales data, inventory records and customer feedback from the pizza shop's internal systems (POS, CRM).

- **Data Integration:**

Consolidate external and operational data into a unified data warehouse. Ensure data quality through cleaning, validation, and standardization.

## Dashboard Development:

- **Menu Section:**

Develop visualizations like pie charts for internal and competitor sales by pizza size and category.

- **Analytics Section:**

Create interactive charts showing hourly, weekly, and monthly sales trends.

- **Customer Review Section:**

Implement text analysis to categorize and visualize reviews (e.g., complaints, delivery, menu).

label    text

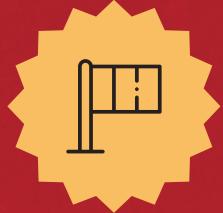

- | label       | text   |
|-------------|--|
| 1 complain  | I didn't like the taste of the pizza   |
| 2 complain  | The pizza had a very bad taste   |
| 3 complain  | the pizza was cold and the delivery was late.  |
| 4 complain  | I ordered a pizza without toppings and got a pepperoni pizza.                                    |
| 5 complain  | the pizza had too much cheese, I want a refund now!  |
| 6 complain  | I'm waiting for the pizza too much time!, I want a refund.                                       |
| 7 complain  | First time ordering and the pizza came an hour late and cold. I'll never order from you again!!! |
| 8 complain  | the pizza had a bd smell, did not want to eat it. so disappointed.                               |
| 9 complain  | The pizza had too much cheese and didn't taste good  |
| 10 complain | The pizza taste is not fresh.  |

# Data Analysis and Insights Generation

- **Descriptive Analytics:**  
Identify current sales patterns, peak hours, and customer satisfaction levels.
- **Predictive Analytics:**  
Use historical data to predict high-demand periods. Forecast staffing needs based on expected sales volumes.

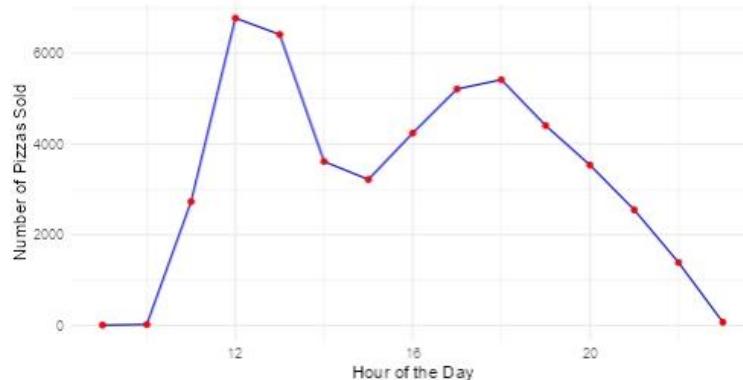

# 03

# Results and Insights

Getting insights from the dashboard

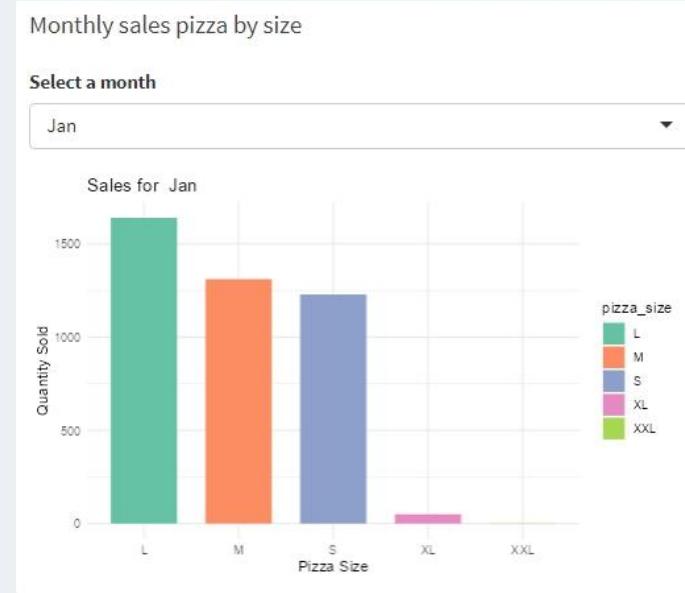

### Hourly trend for total Pizzas sold

### Weekly trend for total orders

- Sales peak between 12 p.m to 1 p.m and 5 p.m during the day.
- After 5 p.m sales slowly starts to decrease each hour.
- Sales generally stay at a consistent range until the December month. Sales gets lower at the last weeks of the December month.

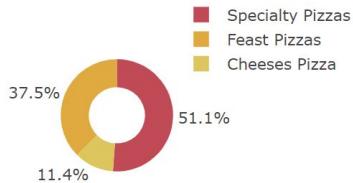

- Demand for each category of pizzas are divided roughly in equal amounts for all months with most high sales for classic.
- Demand for XXL, XL size pizzas are very low.

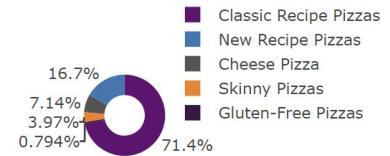

- Competitors have higher sales for their specialty pizzas and classic pizzas.
- For example, Pizza hut has higher sales for their classic recipe pizza.

### Competitor

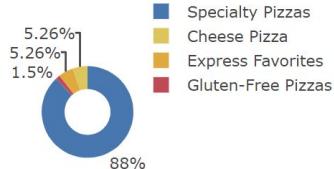

Domino's

Pizza Hut

Godfather

IMO

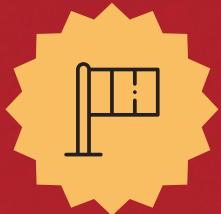

## Customer Question/Review About

- Lots of complaints and questions about the menu.
- Others questions about order, delivery times are also generally high.

# Solutions and Conclusion

Solutions to our problem

# Solutions

## 1. Address Peak Hour Challenges:

Observation:

- Sales peak between 12 PM–1 PM and 5 PM, then decrease.

Solution:

- Staffing: Schedule more staff during peak hours to ensure efficient service and reduce wait times.
- Promotions: Introduce "Happy Hour" discounts from 1 PM to 2 PM or after 5 PM to extend peak sales.
- Inventory Management: Ensure popular ingredients are well-stocked before peak hours to avoid running out.

# Solutions

## 2. Improve Late December Sales:

Observation:

- Sales drop significantly in the last weeks of December.

Solution:

- Seasonal Promotions: Launch special holiday deals or limited-time offers to attract customers.
- Holiday-Themed Pizzas: Introduce festive-themed pizzas or combo deals.
- Delivery Discounts: Offer delivery discounts to encourage orders when customers are busy with holiday preparations.

# Solutions

## 3. Enhance Customer Satisfaction:

Observation:

- Many customer complaints and questions about the menu.

Solution:

- Menu Clarity: Redesign the menu to make it more informative and user-friendly, possibly adding visuals or descriptions.
- Training: Train staff to handle customer inquiries efficiently.

# Solutions

## 4. Increase XXL and XL Pizza Sales:

Observation:

- Low demand for XXL and XL pizzas.

Solution:

- Combo Deals: Create family meal deals that include XXL or XL pizzas with sides.
- Value Promotions: Offer discounts on larger pizzas during weekends or special occasions.

# Solutions

## 5. Competitive Strategy Improvement:

Observation:

- Competitors excel in specific pizza types (Pizza Hut: classic pizzas; Domino's and Godfather's: specialty pizzas).

Solution:

- Enhance Classic and Specialty Lines: Improve recipes or launch premium classic pizzas. For specialty Pizzas we can introduce unique specialty pizzas or limited-time "chef's specials" to attract new customers.
- Competitive Promotions: Offer direct promotions targeting competitor strengths (e.g., discounts on classic pizzas during key competitor promotions).

# Conclusion

- Optimizing staffing during peak hours ensures smoother operations and reduces customer wait times.
- Targeted promotions can sustain sales beyond traditional peaks and during seasonal slumps. Improving menu clarity and addressing customer feedback directly enhance satisfaction and loyalty.
- Focusing on high-demand toppings and underperforming XXL/XL pizzas through strategic promotions and custom offers can boost sales.
